(54) Title: **METHOD OF AUTOMATICALLY INCLUDING CONTEXT RELATED LINKS**

(57) Abstract: There is provided a method of automatically including one or more context related links in association with scene data content. The method is distinguished in that involves providing a recording apparatus including: (i) a data store for reading and/or writing data content; (ii) a sensor for sensing audio and/or visual subject matter from a scene and generating corresponding scene data content; (iii) identifying components for use in identifying a spatial location of the apparatus in proximity of the scene and/or an identity of the scene; (iv) a microprocessor for co-ordinating operation of the data store, the sensor and the identifying components. The method involves the steps of: (b) arranging for the data store to include link data susceptible to being invoked to associate one or more spatial locations and/or scene identities with corresponding linkable data content; (c) activating the apparatus in proximity of a desired scene and receiving audio and/or visual subject matter therefrom to generate corresponding desired scene data content; (d) using the identifying components to determine a spatial location of the apparatus in proximity of the desired scene and/or an identity of the desired scene; (e) identifying one or more links in the link data associated with the spatial location and/or identity determined in step (d) and recording them automatically together in the data store with at least one of the desired scene data content derived from step (c) and the spatial location and/or identity from step (d). The one or more links are concurrently and/or subsequently susceptible to being invoked to include corresponding linkable data content with the scene data to generate final composite data content.
